

# The care of hand infections

Joan Sneddon

# CONTENTS

Plates 1-8	
Historical background	1
The natural history of hand infection	4
Other conditions associated with hand sepsis	6
Treatment of superficial wounds of the hand	7
Tetanus prophylaxis	9
The principles and general management of hand sepsis	10
Treatment of the localized lesion	13
Bacteriology and antibiotic therapy	17
Types of pyogenic hand infection	22
Acute paronychia	23
Chronic paronychia	27
Pulp space infection	29
Acute streptococcal cellulitis of the finger	46
Acute flexor tendon sheath infection	49
Boils and carbuncles	53
Palmar infections	57
Web space infection	59
Infection of the web between the thumb and index finger	61
Septic arthritis	63
Diseases to be considered in the differential diagnosis	72
<i>Occupational:</i> Erysipeloid; orf; herpes simplex (herpetic whitlow) interdigital sinus in a barber's hand; grease-gun granuloma	72
<i>Associated with generalized disease:</i> Gout; metastasis in a finger from carcinoma of bronchus; tuberculous metacarpal; ischaemic changes in the fingers; acute local allergic reaction to wasp sting or insect bite; accidental vaccinia	74
<i>Local lesions:</i> malignant melanoma; pyogenic granuloma; digital thrombosis; glomus tumour; subungual wart; self-inflicted lesions; rubber-band syndrome	80
Bibliography	85
