

INJURIES OF THE KNEE JOINT

BY

I. S. SMILLIE

O.B.E., Ch.M., F.R.C.S.(Ed.), F.R.F.P.S.

Lecturer in Orthopaedics in the University of St Andrews.
Surgeon-in-Charge, Eastern Region (Scotland) Orthopaedic
Service. Surgeon-in-Charge, Orthopaedic Department, Royal
Infirmary, Dundee, and Orthopaedic Unit, Bridge of Earn
Hospital, Perthshire.

SECOND EDITION

EDINBURGH

E. & S. LIVINGSTONE LTD.

16 AND 17 TEVIOT PLACE

1951

CONTENTS

CHAPTER	PAGES
I THE IMPORTANCE OF THE QUADRICEPS	1-13
Comparative anatomy 1. Relation of derangement of mechanism to evolution 1. Quadriceps insufficiency 2. Importance of active exercise 2. Vastus medialis 3. Principles of redevelopment of muscle function 4. Quadriceps exercises 7. The exercises 9.	
II TRAUMATIC SYNOVITIS AND HAEMARTHROSIS	14-23
Synovial membrane 14. Origin and function of synovial fluid 16. Reaction of synovial membrane to injury 16. Regeneration of synovial membrane 16. Constituents of a traumatic synovial effusion 17. Rationale and technique of aspiration in traumatic synovitis 18. Clinical features and treatment of traumatic synovitis 19. Reaction of synovial tissues to haemarthrosis 21. Clinical features and treatment of haemarthrosis 22.	
III THE SURGICAL ANATOMY AND PHYSIOLOGY OF THE MENISCI AND MECHANISM OF THEIR INJURIES	25-37
Medial meniscus 25. Medial ligament: relationship to medial meniscus 26. Tibial attachment of medial ligament 27. Lateral meniscus 27. Lateral ligament: relationship to lateral meniscus 28. Mobility of lateral meniscus 29. Relationship of the menisci to the femoral and tibial condyles 29. Significant features of joint physiology in flexion and extension 30. Function of the menisci 31. Relation to evolution of knee joint 32. Summary of factors which may influence the vulnerability of menisci 32. Mechanism of injury 35.	

CHAPTER	PAGES
IV SURGICAL PATHOLOGY OF THE MENISCI	38-72
Classification of lesions 38. Longitudinal tears 38. Transverse tears 45. Cystic degeneration 48. Congenital anomalies 53. Calcification and ossification 61. Healing of torn meniscus 63. Regeneration of menisci following excision 67. Author's meniscus statistics 71.	
V CLINICAL FEATURES OF INTERNAL DERANGEMENTS OF THE KNEE JOINT RELATIVE TO THE MENISCI	73-101
History 73. Locking 76. Giving-way 78. Effusion 79. Quadriceps wasting 80. Condition of accessory supporting structures 80. Localisation of tenderness 80. Presence of a click 81. Lateral meniscus 85. Recent injuries 86. Lesions of both menisci 87. Cystic degeneration 89. Congenital discoid meniscus 93. Retained posterior segment 96. Lesions of regenerated menisci 96. Lesions of the menisci in women 97. Radiological examination 98. Errors of diagnosis 100.	
VI TREATMENT, AFTER-TREATMENT, AND COMPLICATIONS OF INJURIES OF MENISCI.	102-135
Reduction of locked joint 102. Technique of manipulation 102. Further treatment of torn meniscus 104. Treatment of double injuries 106. Relation of osteoarthritis to lesions of menisci 107. How much of a torn meniscus should be excised? 109. Pre-operative treatment 110. Instruments 111. Technique of operation 113. Difficulties encountered in removal of a meniscus 115. Removal of posterior segment through an additional incision 118. Treatment of cystic degeneration 120. Immediate after-treatment and rehabilitation in meniscus operations 121. Complications of operation 123. Prognosis 130. Changes in the knee joint following meniscectomy 134.	
VII INJURIES OF LIGAMENTS	136-209
Anterior cruciate ligament 136. Mechanism of injury 138. Classification of injuries 140. Treatment of recent ligamentous injuries 146. Medial ligament 155. Post-traumatic para-articular ossification (Pelligrini Stieda "disease") 157. Complete rupture of medial ligament 166. Classification of injuries 167. Treatment of recent injuries 169. Posterior cruciate ligament 176. Lateral ligament 180. Dislocation of the superior tibio-fibular joint 182. Avulsion of iliotibial band from lateral condyle of tibia 183. Dislocation of knee joint 184. Old ruptures of ligaments 187. Anterior cruciate 187. Medial 194. Posterior cruciate 197. Lateral 198. Operative treatment in old ruptures of ligaments 198. Tendon transference 199. Reconstruction of anterior cruciate ligament using peripheral portion of medial meniscus 200. Extra-articular stabilising operation for rupture of anterior cruciate and medial ligament 204. Reconstruction of medial ligament using tendon of semitendinosus 208. Reconstruction of posterior cruciate ligament 209.	

CHAPTER

PAGES

VIII	INJURIES OF EXTENSOR APPARATUS	210-257
	Classification of injuries 210. Rupture of muscle 210. Avulsion of quadriceps muscle from patella 213. Fractures of patella 214. Rationale of treatment 216. Indications and treatment in fractures of patella 223. Avulsion of ligamentum patellae from patella 232. Strain of attachment of ligamentum patellae or quadriceps muscle to patella: Sinding Larsen-Johannson disease (osteochondritis of patella) 233. Fracture of tibial tubercle 235. Injuries of patella resulting from direct violence 239. Classification 239. Stellate fracture 239. Marginal fracture 239. Congenital bipartite patella 242. Chondromalacia patellae (traumatic degenerative fibrillation of patella) 243. Dislocation of patella 245. Recurrent dislocation of patella 248. Tangential osteochondral fracture of the patella (fracture of articular surface: "osteochondritis dissecans") 255.	
IX	FRACTURES OF TIBIA AND FEMUR INVOLVING THE KNEE JOINT	258-297
	Fracture of tibial table 258. Fractures of lateral tuberosity 258. Fracture by compression 258. Fracture by abduction 259. Treatment 262. Fracture of both tuberosities 268. Fracture of medial tuberosity 269. Old fractures of tibial table 269. Arthrodesis of knee joint 230. Infracondylar fracture of tibia 274. Old infracondylar fractures of the tibia: treatment 277. Genu recurvatum, varum or valgum, due to fractures or old injuries of upper tibial epiphysis 279. Condylar and supracondylar fractures of femur 283. Supracondylar fracture 283. Old supracondylar fractures of the femur with malunion 289. Separation of lower epiphysis of femur 291. Intercondylar fractures of femur 293. Fracture of a single condyle 294.	
X	LOOSE BODIES OF TRAUMATIC ORIGIN : FOREIGN BODIES	298-322
	Etiology of osteochondritis dissecans 298. Sequelae of separation of fragment 308. Clinical features of osteochondritis before and after separation of fragment 309. Treatment 311. Operative technique 314. Loose bodies in posterior compartment 318. Foreign bodies in knee joint 321.	
XI	WOUNDS OF KNEE JOINT AND SURROUNDING TISSUES	323-343
	Defensive power of articular tissues and synovial fluid 323. Difference between civil and war wounds 325. Controversial issues in treatment of war wounds 325. Suture of synovial membrane 327. Immobilisation 328. Chemotherapy 329. Articular wounds with fractures 329. Results of treatment 330. Diagnosis, classification, and treatment of wounds of knee joint 331. The infected joint 335. Wounds of surrounding tissues 342.	
XII	CERTAIN OTHER INJURIES	344-356
	Traumatic affections of bursae 344. Prepatellar bursitis 344. Bursa between ligamentum patellae and tibia (deep infrapatellar bursa) 346. Popliteal cyst (Baker's cyst, semimembranosus bursa) 347. Injuries of infrapatellar fat pad and synovial fringes 354. Neuritis of a branch of patellar plexus 356.	

CHAPTER	PAGES
XIII THE STIFF KNEE	357-383
<p>Loss of flexion 357. Prevention 358. In injuries of the joint 358. Factors concerned in loss of range of flexion in knee joint following fracture of the shaft of the femur 358. Time factor: implications of delayed union 358. The violence which produces the fracture also injures the joint 361. Methods of treatment prejudicial to the welfare of the knee joint 361. Errors in the course of treatment 364. Fractures of neck and trochanteric region of femur; osteochondritis of hip joint 366. Treatment of temporary stiffness 367. Treatment of persistent stiffness 369. Manipulation 369. Operation 373. Use of mechanical barrier to the formation of further adhesions in the suprapatellar pouch and lateral compartments 374. Loss of flexion due to adhesion of quadriceps to femur 375. Quadriceps-plasty 379. Arthroplasty of knee joint 379. Loss of extension 379.</p>
