REPLANTATION

Studies on clinical replantation surgery

Tampere 1983

CONTENTS

List of original articles	9
1. INTRODUCTION	11
2. SURVEY OF LITERATURE	13
2.1. Historical background	13
2.2. Terminology	13
2.3. General indications for replantation	14
3. THE PURPOSE OF THE INVESTIGATION	15
4. PATIENTS	16
4.1. Patient selection and indications for replantation	16
4.1.1. Age	16
4.1.2. General condition and associated injuries or diseases	16
4.1.3. Functional need for the amputated parts of the extremity	17
4.1.4. Level of amputation	18
4.1.5. Mechanism of the injury	18
4.1.6. Condition and preservation of the amputated part	18
4.1.7. The actual usefulness or possible danger of replantation to the patient	18
4.2. The patients of the present series	19
4.2.1. Geographical distribution and transportation. The need for replantation surgery	19
4.2.2. Age, sex and occupation	19
4.2.3. Preoperative condition of the patients. Additional injuries and diseases	20
4.3. Comments on the patients	20
5. OPERATIONS	21
5.1. Remarks on the operative techniques used in previous investigations ...	21
5.2. Operative techniques used in the present series	21
5.2.1. Anaesthesia	21
5.2.2. Macroreconstruction	21
5.2.3. Microreconstruction	22
5.3. Comments on special techniques used	23
6. POSTOPERATIVE CARE, COMPLICATIONS AND REOPERATIONS .	24
6.1. Remarks on the postoperative care, complications and reoperations in previous investigations	24
6.2. Postoperative care, complications and reoperations in the present series	24
6.2.1. Basic principles in postoperative care	24
6.2.2. Skin temperature monitoring	25

6.2.3.	Vascular and other complications	25
6.2.4.	Reoperations after vascular failure	25
6.2.5.	Reoperations in a secondary phase	26
6.3.	Comments on postoperative care, complications and reoperations	26
7.	METHODS OF THE STUDY	27
7.1.	Patient records	27
7.2.	Skin temperature monitoring	27
7.3.	Patency rates after microvascular anastomosis	27
7.4.	Questionnaire for thumb replantation patients	27
7.5.	Comments on the methods	27
8.	RESULTS	28
8.1.	Remarks on the results of previous investigations	28
8.2.	The results of the present investigation	28
8.2.1.	Primary survival rates	28
8.2.2.	Functional results	28
8.2.3.	Results of microvascular anastomoses with the sleeve technique (paper III)	29
8.2.4.	Results in the study of skin temperature dynamics after replantation (paper IV)	29
8.3.	Comments on clinical results in papers I and II	29
8.3.1.	The influence of the patient selection	29
8.3.2.	The influence of the trauma mechanism	29
8.3.3.	The influence of the technique used	29
8.4.	Comments on the results in papers III and IV	30
9.	DISCUSSION	31
10.	SUMMARIZED CONCLUSIONS	32
11.	ACKNOWLEDGEMENTS	33
12.	REFERENCES	35
